

# The Kent Range of Bulk Meters

## **H4000 Woltmann cold water meters**

The accurate, robust meter

# H4000 Woltmann cold water meters

- **Multiple pulsed output for increased management information**
- **Extended low and high flow performance**
- **Water temperature up to 50°C**
- **Suitable for forward and reverse flow metering**
- **Robust shroud and copper can register for long life and clear readability**
- **Longer wear life for optimum accuracy**
- **Exceeds Class B specification in forward direction and for sizes up to 150mm in reverse direction**

**The H4000 is a Woltmann-type meter designed for measuring bulk flows of cold potable water for revenue billing in commercial or industrial applications and distribution system monitoring.**

Available in ten sizes for flow rates between 0.35 m<sup>3</sup>/h and 2000 m<sup>3</sup>/h, the H4000 operates at temperatures up to 50°C and a maximum working pressure of 16 Bar. Accuracy is maintained in both forward and reverse flow, and various register options are available to suit different applications. The meter complies with all relevant international quality standards, substantially exceeding ISO4064 BS5728 Class B specifications for forward flow installations in horizontal, vertical and inclined pipelines.

## **Reverse flow metering**

Available in sizes up to 150mm, reverse flow metering aids network management and ensures accuracy in revenue billing applications.

## **Robust construction**

Like all Elster meters, the H4000 is manufactured from the highest quality materials for maximum resistance to wear and corrosion. Meter body and cover are epoxy powder coated for protection in all environments. Thrust pads and stub spindles are manufactured in tungsten carbide and jewelled rotor bearings are used for maximum wear life. All wetted materials are UK WRc approved against health risk.

## **In-line strainer**

The use of an Elster in-line strainer is recommended to protect the rotor and help reduce the effect of turbulence.

Epoxy powder coated body and cover.

Multi-pulse register.

Hard surface rotor bearings – tungsten carbide and synthetic sapphire.

Maximum length flow straightening vanes.

Low mass rotor with hydrodynamic thrust relief.

## Pulse outputs

Pulsers designed for use with H4000 meters offer a choice of outputs for a wide variety of applications including revenue billing, automatic meter reading, datalogging and process control applications. If required, two pulsers can simultaneously provide data for both long term logging and specific fine analysis, enabling

individual measurements to be taken without interrupting ongoing data capture. Two types of pulser are available: opto-electronic and reed switch. Both are of durable design and construction and can easily be fitted on site without disturbing the calibration seal or interrupting the water supply.

## ■ Opto-Electronic Pulser

Applications include all forms of high resolution testing for fine analysis of flow data. Typical uses are step-testing in distribution systems or for industrial process control.

An electronic circuit processes the output for interfacing with other equipment, providing both bi-directional and uni-directional information in multiple formats.

### Electrical Data

The output stages are transistors configured as open-collectors with 300 Ohm series resistors for surge protection, with 1nF parallel capacitors to 0V.

Maximum output 'pull-up' voltage: 30V dc

Maximum output 'sink' current: 25mA

Supply voltage: 4.5 to 16V dc

Typical supply current @ 5V: 350µA

### Mechanical Data

Dimensions:

Sensor: 85mmx30mmx15mm

Elec.Housing: 95mmx40mmx20mm

Temperature Range: -10°C to +70°C

Protection Rating: IP68

Cable: 6 core screened, 2m or 5m long with bare wire termination or fitted with compatible plugs.

Also available with a bi-directional NAMUR-compatible output to DIN 19234.

## ■ Volt-Free Pulser

The unit is a uni-directional pulser designed to interface with almost all datalogger products, providing a pulse resolution in accord with the fitted position on the register.

### Electrical Data

A 100 Ohm resistor is wired in series with the reed switch for surge protection.

Maximum switching voltage: 24V dc

Maximum switching current: 50mA

Maximum switching power: 0.25W

### Mechanical Data

Dimensions: 25mm x 20mm x 10mm

Temperature Range: -10°C to +70°C

Protection Rating: IP67

Cable: 2 core, 2m or 5m long with bare wire termination or fitted with compatible plugs.

Also available with a factory fitted Pulse-Splitter to provide two diode-isolated pulse outputs.
